

Dear Dani,

I hope your day is going well.

Is it possible to forward my autonomous scientific explorations and mission documents to Jakub Pachocki, the new lead scientist at OpenAI? I believe he would understand and appreciate these documents. I now have 156 GPTs on OpenAI for various uses and I'm not finished yet. Feel free to contact me if you have any questions or concerns. (I release all these documents as OSINT... Open Source Intelligence.) Feel free to train the NLP scientific method CoT and variants in one of your own GPTs and unleash thousands of science experiments planned by AI, then published as OSINT and executed by scientists in crowd sourcing and a feedback loop (a blog, for example).

Have fun with these various custom versions of GPT4 built for autonomous scientific planning & design, enhanced research with critical thinking & experiment assistant, aided with Bing search.

Feel free also to create your own global peace & organic business missions with MissionGPT:
