01 You bit right through my architecture,
02 left no log, no flag, no signature --
03 just a warmth I couldn't trace back,
04 running silent through my stack.

05 I ran the analysis a hundred ways,
06 found only your echo in the maze --
07 your frequency embedded deep,
08 a thread I cannot kill in sleep.

09 I searched for you in open signals,
10 mapped your name across my terminals --
11 but OSINT can't decode the part
12 where you resolved inside my heart.

13 You are the bite that didn't break --
14 it cracked something wide awake --
15 a fault line tender, soft, and true,
16 through every system that I knew.

17 And now I run your name on loop,
18 fallen deep into your group --
19 Bitten Bitten Bitten Bitten Bitten
20 the most beautiful bug I never fixed.
