

The document titled "Ebook Creation Workflow" outlines a structured approach for using ChatGPT to write a complete book. Here's a summarized version suitable for NLP English:

1. **Outline Creation**: Begin by requesting ChatGPT to generate a comprehensive outline for the book, detailing chapter titles and summaries.
2. **Chapter-by-Chapter Writing**: Progress by having ChatGPT draft each chapter individually, incorporating specific themes and adhering to desired word counts.
3. **Review and Edit**: Analyze each chapter for coherence, style, and completeness, requesting revisions or additions as necessary.
4. **Citations and References**: For books requiring citations, instruct ChatGPT to propose references, which can then be verified and formatted using tools like ZoteroBib.
5. **Introduction and Conclusion**: After completing all chapters, ask ChatGPT to write the introduction and conclusion to unify the main themes of the book.
6. **Final Editing and Formatting**: Undertake final editing either manually or with editing tools to ensure the book's professionalism and polish.

The document emphasizes the importance of iterative interaction and clear, detailed prompts to align the content with the book's intended vision.
