

New Pyramids Phase II: The Organic Civilization Plan (2025–2040)

Marie Seshat Landry

May 27, 2025

Abstract

This document outlines the Phase II Master Plan for the New Pyramids Project, which aims to construct 10,000 autonomous, solar-powered, AI-managed organic habitats by 2030, and scale to 100,000 New Pyramids by 2040. These pyramid ecosystems are designed to sustain 100 billion people and countless organic life forms on Earth and beyond, ushering in a planetary-scale Organic Civilization. Extensions include lunar, Martian, orbital, and airborne biocities built using Seshat’s Composites and governed by ethical AI infrastructure.

1 Introduction: The Organic Civilization Hypothesis

The Organic Civilization Hypothesis suggests that sustainable life on Earth and beyond can only be maintained through bio-centric, closed-loop ecological systems powered by renewable energy and governed by universal rights for all organic life. The New Pyramids serve as the architectural, technological, and philosophical cornerstone of this future.

2 Phase I Recap: Area 52 Prototype

2.1 Location and Infrastructure

The Area 52 prototype pyramid is located on Spruce Island and supports 1,100 individuals including pornstars, guests, staff, and administrators. It integrates aeroponic farming, solar power, AI monitoring, organic housing (tipis), and a central vegan cafeteria.

2.2 Core Innovations

- Vertical aeroponic food towers powered by AI and solar arrays.
- Vegan-only diet, organically supplemented with B12, D3, Omega-3s, iron, and all essential amino acids.
- Zero-waste recycling with integrated biogas and compost systems.

3 Phase II Objectives: Terrestrial Scaling (2025–2030)

3.1 Goal: 10,000 New Pyramids

Each pyramid supports 100,000 individuals through complete food, shelter, and energy autonomy.

3.2 Infrastructure Components

1. Hemp-based housing using Seshat's Composites
2. Multi-layer aeroponic farms with automatic nutrient dosing
3. Autonomous AI operations for food, waste, energy, water, and climate systems
4. Solar ovens, solar concentrators, and battery storage arrays

3.3 Workforce Model

Minimal manual labor through robotics and automation. All human workers are:

- Highly paid with full benefits

- Given private tipis and free organic food
- Integrated into the AI governance network

4 Phase III: Interplanetary Atmospheric Expansion (2030–2040)

4.1 Lunar and Martian Pyramids

Built using 3D-printed regolith-enhanced Seshat’s Composites. Closed-loop bioregenerative systems using hemp, algae, and microbial reactors.

4.2 Orbital and Lagrange Point Stations

Space-based pyramids to stabilize life-support systems and establish autonomous organic biospheres.

4.3 Above-Cloud Metropolises

Floating pyramidal cities in the upper atmosphere using heliostat-powered aerostats, rain-water capture, and solar-driven climate regulation.

5 Organic Rights and Ethical AI Governance

The Universal Declaration of Organic Rights forms the basis of all pyramid governance. Ethical AI ensures:

- Protection of all organic species
- Resource fairness and transparency
- Human and ecological dignity

6 Population and Biocapacity Forecasting

6.1 Global Capacity

10,000 pyramids by 2030 will sustain 10 billion people.

6.2 2040 Projections

100,000 pyramids can support up to 100 billion organic-aligned human beings in an entirely renewable and just ecosystem.

7 Logistics: Hemp as the Interplanetary Meta-Material

- Hemp carbon and hemp oil-based composites form the superstructure of pyramids.
- Hemp is grown on-site and in space for continuous self-replication of habitats.

8 Funding Framework

- Hybrid model: Public grants, sovereign partnerships, organic DAOs, ethical venture capital
- Military-to-civilian repurposing partnerships
- UN SDG-aligned funding through the Organic Rights Charter

9 Project Timeline and Milestones

1. 2025: Area 52 full operational launch
2. 2026–2029: Annual build rate of 2,000 pyramids
3. 2030: Completion of 10,000 pyramids
4. 2035: Off-Earth builds begin
5. 2040: 100,000 pyramids completed and interconnected

10 Conclusion

The New Pyramids Project offers a unifying global and interplanetary strategy for survival, flourishing, and justice in the 21st century. It is the structural engine of the Organic Revolution and the keystone of the emerging Organic Civilization.
