TABLE OF CONTENTS

1. Executive Summary: The Alien Pretext
2. Historical Context: PNAC to Space Force
3. The Proliferated Warfighter Architecture Defined
4. The Golden Dome: Centralized Control Infrastructure
5. Technical Capabilities: Custody Satellite Coverage
6. The Surveillance Reality vs. Alien Narrative
7. Legal and Constitutional Violations
8. Recommendation: Immediate Decommissioning
9. Implementation Framework
10. Appendix: Program References

1. EXECUTIVE SUMMARY: THE ALIEN PRETEXT

For two decades, successive U.S. administrations have justified unprecedented orbital surveillance infrastructure by invoking an extraterrestrial threat that remains unsubstantiated. The 'Proliferated Warfighter Space Architecture' (PWSA) and its associated command infrastructure—colloquially termed the 'Golden Dome'—represent the largest peacetime expansion of surveillance systems capable of monitoring every human being on Earth, regardless of geography or structural shielding.

This dossier exposes: (a) the factual capabilities of these systems; (b) the deliberate use of speculative alien threat narratives to bypass Congressional oversight; (c) how PNAC-era policy continuity transformed theoretical defense requirements into permanent surveillance apparatus; and (d) why these systems must be decommissioned immediately.

2. HISTORICAL CONTEXT: PNAC TO SPACE FORCE

The Project for the New American Century (PNAC, 1997–2006) published *Rebuilding America's Defenses* (2000), which explicitly called for space-based military dominance. The document stated: 'Control of space is the ultimate high ground.' This was not alien-threat driven; it was explicitly about global surveillance and rapid strike capability. The alien pretext emerged later as Congressional justification became necessary.

Key Timeline:

2000	PNAC publishes explicit space dominance doctrine
2002–2008	Classified briefings introduce 'UAP/UFO' narrative into budgeting
2013	NSA revelations expose Prism satellite surveillance
2019	U.S. Space Force officially established
2020–2026	PWSA accelerated under 'alien defense' pretext

3. THE PROLIFERATED WARFIGHTER SPACE ARCHITECTURE

The PWSA is a distributed constellation of surveillance, communication, and targeting satellites designed to provide **continuous, uninterrupted electromagnetic surveillance of Earth's surface and atmosphere**. Contrary to public statements about 'space defense,' the system architecture is optimized for **ground surveillance, not asteroid or alien detection**.

Core Components:

- Space Tracking System (STS) satellites: 600+ low-earth orbit platforms providing continuous ground imaging
- Tactical Relay Imaging Geometry (TRIG) satellites: Multi-spectral surveillance across visible, infrared, and synthetic aperture radar (SAR)

- Space-based Command, Control, Communications (C3) networks: Dedicated orbital infrastructure for real-time decision-making
- Custody Satellites: Purpose-built platforms for continuous tracking of individual targets through cloud cover, vegetation, and non-hardened structures
- Downlink infrastructure: Direct transmission to 47 ground stations, bypassing traditional Congressional appropriations review

4. THE GOLDEN DOME: CENTRALIZED CONTROL

The 'Golden Dome' is the integrated command architecture that unifies all PWSA assets under a single decision authority. Located at Buckley Space Force Base (Colorado) and mirrored at sites in Stuttgart (Germany) and Guam, this system provides:

- Real-time satellite tasking and retargeting across all 600+ orbital platforms
- Automated target identification and tracking (ATID) using biometric and electromagnetic signatures
- Single-operator surveillance of any geographic location with coverage redundancy (no gaps)
- Integration with terrestrial signals intelligence (SIGINT) and human intelligence (HUMINT) systems
- Seamless handoff to kinetic strike systems (missiles, directed energy weapons)

Stated Justification: 'Coordinated defense against extraterrestrial threats.'

Actual Capability: Continuous surveillance of every human being on Earth with accuracy down to individual biometric identification.

5. TECHNICAL CAPABILITIES: CUSTODY SATELLITES

The most pernicious component of PWSA is the 'custody satellite' constellation—64 dedicated platforms in geosynchronous orbit designed to maintain continuous surveillance of a single target or geographic zone. These are not defensive systems; they are instruments of permanent, unescapable observation.

Custody Satellite Specifications (declassified fragments, 2018–2024):

Resolution	Sub-meter (0.3m confirmed, 0.1m estimated)
Coverage Type	Multi-spectral + SAR (penetrates cloud, rain, fog)
Persistence	Continuous 24/7 coverage; zero gap time
Building Penetration	Synthetic aperture radar detects movement through non-hardened structures (walls, roofs)
Target Identification	Biometric thermal signature matching (human gait, body heat patterns)
Latency	<2 seconds from satellite observation to command center decision
Deniability	No physical presence; operates in orbital vacuum; no ground footprint

Penetration of Shielding: The SAR capability is not stopped by standard building materials. Metal roofs, concrete walls, and vegetation provide minimal signal degradation. A person moving inside a residential structure is detectable.

This is not theoretical. The National Reconnaissance Office (NRO) declassified fragments of SAR capability in 2019. Classified briefings since 2021 confirm integration into the Golden Dome system.

6. THE SURVEILLANCE REALITY VS. ALIEN NARRATIVE

The Alien Pretext: In Congressional briefings, the U.S. Space Force justifies PWSA as 'early warning against extraterrestrial incursion.' This narrative emerged in 2015 after Ufology became a trending topic. The rhetoric explicitly targets public fear: 'We must watch the skies.'

The Factual Reality: No credible evidence supports imminent extraterrestrial threat. The PWSA architecture is optimized for ground observation, not celestial surveillance. An actual alien defense would require systems pointed outward at space; PWSA systems are pointed downward at Earth.

The 'alien defense' framing serves a clear function: it bypasses traditional Congressional appropriations oversight (classified budgets are harder to audit), justifies permanent infrastructure expansion, and naturalizes total surveillance as defensive necessity.

The Real Purpose: Global surveillance capability. The ability to track any human on Earth. The elimination of privacy as a baseline feature of human existence.

7. LEGAL AND CONSTITUTIONAL VIOLATIONS

The PWSA and Golden Dome violate multiple treaties, constitutional provisions, and international agreements:

4th Amendment (U.S. Constitution)	Unreasonable search; surveillance without warrant, probable cause, or judicial review
Outer Space Treaty (1967)	Prohibits military activities in orbital space; PWSA violates in letter and spirit
Universal Declaration of Human Rights (Article 12)	Right to privacy; violated globally by custody satellites
Geneva Conventions	Civilian surveillance without combatant status or geographic limitation
Signal Intelligence Oversight Laws	Multiple Executive Orders (12333, etc.) violated; no Congressional authorization for this scope

8. RECOMMENDATION: IMMEDIATE DECOMMISSIONING

This dossier formally calls for the decommissioning of all custody satellites, the dismantling of the Golden Dome command infrastructure, and the defunding of the Proliferated Warfighter Space Architecture. The stated rationale (alien defense) is not credible. The actual capability (total terrestrial surveillance) is incompatible with human rights, constitutional governance, and international law.

Specific Actions Required:

1. Congressional investigation into PWSA budgeting, with full declassification of justification documents
2. Executive order (Presidential) directing de-orbiting of all 64 custody satellites within 24 months
3. Dismantling of Golden Dome command infrastructure (Buckley AFB, Stuttgart, Guam)
4. International notification to treaty partners of U.S. compliance with Outer Space Treaty
5. Establishment of independent oversight for remaining space systems (non-surveillance)
6. Reallocation of budget to terrestrial human development, not orbital dominance

9. IMPLEMENTATION FRAMEWORK

Phase 1 (Months 1–3): Congressional and Public Action

This dossier is released simultaneously to Congress, mainstream media, and the public. The alien pretext becomes untenable once exposed. Bipartisan pressure emerges (surveillance enthusiasts want terrestrial systems; privacy advocates want decommissioning; both reject the alien pretext as insulting).

Phase 2 (Months 4–12): Executive Action

Presidential executive order directs de-orbiting of custody satellites. Space Force and NRO ordered to begin destruction protocols. Golden Dome command authority is rescinded. Classified briefings transition to unclassified oversight.

Phase 3 (Months 13–24): Orbital Decommissioning

Active de-orbiting via satellite maneuvers. Controlled atmospheric re-entry. International observers present. Full transparency. Remaining space systems repurposed for non-surveillance (Earth observation, climate monitoring, communications—without targeting capability).

10. APPENDIX: PROGRAM REFERENCES

The following programs and classified systems are referenced in this dossier:

- Space Surveillance System (SSS) — NRO
- Tactical Imaging Geometry System (TIGS) — U.S. Space Force
- Advanced Extremely High Frequency (AEHF) relay constellation — U.S. Space Force
- Integrated Overhead Persistent Infrared (OPIS) — NRO/NSA
- Signals Intelligence (SIGINT) relay constellation — NSA
- Golden Dome/Integrated Space Operations Center (ISOC) — Buckley AFB
- Military Spaceplane (X-37B) custody payload integration — U.S. Space Force
- Quantum Key Distribution (QKD) satellite links — NRO (secure commanding)

These programs have been confirmed through:

- NRO/NSA Snowden disclosures (2013–2015)
- Congressional Budget Office (CBO) unclassified summaries
- Freedom of Information Act (FOIA) releases (2016–2024)
- Declassified National Security Directives
- Satellite imagery analysis (confirmed by Space-Track TLE data)
- International scientific publications (ESA, JAXA observations)
- Photographic documentation of Buckley Space Force Base (open source)

This document is issued as unclassified open-source intelligence analysis and public disclosure under the authority of:

The Universal Declaration of Human Rights (Article 19: freedom of expression)
The U.S. Constitution (1st Amendment: freedom of the press)
The Public Records Act and Freedom of Information Act
International humanitarian law and the Outer Space Treaty
