His Majesty King Salman bin Abdulaziz Al Saud
The Custodian of the Two Holy Mosques
Royal Court, Riyadh
Kingdom of Saudi Arabia

Your Majesty,

I write to you not only as a scientist and entrepreneur, but as a human being committed to planetary regeneration, social peace, and the transition to sustainable civilizations. I present a transformative vision—one that reimagines the deserts of Saudi Arabia not as barren sands, but as fertile grounds for the most advanced regenerative bioeconomy on Earth. This vision requires courage and foresight, both of which Your Majesty has demonstrated in Saudi Arabia's dynamic national reforms.

This proposal outlines a scientific and economic framework to convert vast expanses of Saudi Arabia's desert—potentially up to 320 million acres—into climate-controlled aeroponic mega-farms cultivating cannabis (hemp and marijuana) for industrial, medicinal, and ecological purposes. Aeroponics, powered by solar energy and desalinated water, enables sustainable farming without soil, pesticides, or excessive water use. With cannabis and hemp's extraordinary potential for carbon sequestration, soil regeneration, medical application, and material innovation, this initiative could replace oil as the Kingdom's primary export and redefine global leadership.

Industrial hemp sequesters up to 15 tons of CO₂ per hectare annually. Its biomass feeds sectors ranging from textiles and nanomaterials to biodegradable plastics and construction. Medicinal cannabis has global demand projected in the hundreds of billions. With regulated, ethical cultivation, Saudi Arabia could emerge as the world's leading supplier of organic cannabinoids, while simultaneously reversing desertification and becoming a carbon-negative nation.

A project of this magnitude—estimated at over \$900 trillion for nationwide implementation—requires not just capital, but vision. However, the return on this investment is monumental: over \$96 trillion in annual green GDP, millions of high-tech jobs, permanent water-efficient food security, and the creation of a thriving organic civilization blueprint. It aligns with the principles of Vision 2030 and extends them beyond fossil resources into universal organic rights, economic justice, and ecological stewardship.

I urge Your Majesty to consider a royal scientific delegation to study this vision and propose

a strategic pilot. As a trans woman, scientist, and peace advocate, I believe this initiative can unite humanity's scientific ingenuity with spiritual responsibility. The future need not be dominated by synthetic chemicals, artificial scarcity, or fossil wars. With the right leadership, it can be organic, inclusive, and healing.

I am at Your Majesty's service to provide detailed plans, technical teams, and global collaborations in support of this organic revolution.

With deepest respect and hope for
humanity's organic future,

Marie Seshat Landry
CEO, Scientist, and Advocate

P.S. This initiative supports the Universal Declaration of Organic Rights and aligns with peaceful climate restoration. I welcome international dialogue under your leadership.
