

UNIVERSAL DECLARATION OF ORGANIC RIGHTS (UDOR) - VERSION 2026

The Constitution of the Organic Revolution of 2030

Keywords: #UDOR #OrganicRevolution2030 #EthicalAI #RightsOfNature #Sustainability #MarieSoleilSeshatLandry #Hempoxies #PostPredatoryEconomics

I. AUTHORSHIP & AFFILIATIONS

- **Author:** Marie-Soleil Seshat Landry
- **Titles:** CEO of Landry Industries, Spymaster, Queen of Acadie, Queen of the Universe.
- **Research ID:** [ORCID iD: 0009-0008-5027-3337](#)
- **Status:** Ratified for the Organic Revolution (2024–2030)
- **Date:** January 2026

II. EXECUTIVE SUMMARY & KEY JUDGMENTS

The **UDOR 2026** is a scientific and legal manifesto designed to transition global society from a predatory, petrochemical-based economy to a life-centric, regenerative model.

Key Judgments:

1. **Unity of Life:** All organic life is interconnected. The degradation of one system (e.g., soil health) is a direct violation of the rights of all inhabitants.
2. **Post-Predatory Shift:** Human civilization must pivot from "extraction" to "stewardship."
3. **The 2030 Deadline:** December 31, 2030, is the non-negotiable threshold for global compliance with organic standards.

III. THE CODEX: ARTICLES OF THE UDOR

Section A: Fundamental Organic & Environmental Rights

Article 1: Right to Exist and Thrive All organic species and ecosystems possess the inherent right to exist, persist, and regenerate their vital cycles without human-induced ecocide.

Article 2: Planetary Integrity (Mother Earth) The Earth is a living being. It has the right to health, biodiversity, and clean air, soil, and water. Exploitation for profit that causes permanent damage is a violation of the UDOR.

Article 3: Soil Sovereignty Soil is the foundation of life. All living beings have the right to soil that is free from synthetic toxins, heavy metals, and petrochemical contamination.

Article 4: Water Stewardship Access to clean, living water is an inalienable right for all organic life. Water cannot be owned by private corporations for exclusionary profit.

Section B: Animal Welfare & Biotic Integrity

Article 11: Freedom from Cruelty Every animal has the right to live free from torture, inhumane farming practices, and unnecessary suffering.

Article 12: Habitat Protection Wildlife species have the right to the preservation of their natural habitats. Urban expansion must incorporate "Green Corridors" to ensure biotic connectivity.

Section C: Human, Social & Cultural Rights

Article 21: Food Sovereignty Every human has the right to access non-GMO, organic, and nutrient-dense food. The production of "toxic calories" for profit is a crime against the organic family.

Article 22: Equality & Expression The UDOR protects the right to marriage equality, gender expression, and protection from all forms of discrimination. Diversity is an organic strength.

Article 23: The Right to a Healthy Environment Urban environments must be designed for health, incorporating sustainable bio-materials (e.g., Hempoxies) and ample green space.

Section D: Digital Ethics & Ethical AI (PhytoIntelligence)

Article 31: Right to Ethical AI Technology must be ethically aligned with biological imperatives. AI (PhytoIntelligence) shall serve as a tool for ecological restoration, not surveillance or manipulation.

Article 32: Data Autonomy & Privacy All sentient beings have the right to digital privacy, cognitive liberty, and ownership of their personal data.

Article 33: Protection from AI Bias Digital entities and algorithms must be transparent and free from predatory biases that marginalize specific organic groups.

Section E: Economic Transformation (Post-Predatory Model)

Article 41: Full-Cost Accounting Economic value must reflect the true cost to the environment. Industries must transition to 100% recyclable, bio-based materials (The Hempoxies Standard).

Article 42: Termination of Usury The predatory debt-based model is replaced by an economy of abundance, focused on the regenerative capacity of industrial hemp and other renewable resources.

IV. METHODOLOGY & SCIENTIFIC LOOP

1. **Observation:** Current petrochemical systems create "chemical cul-de-sacs" and ecological debt.
2. **Hypothesis:** Transitioning to organic-certified manufacturing and regenerative agriculture can reverse climate disruption.
3. **Experiment:** Implementation of Phase 1 (2024–2027) bans on high-impact synthetic chemicals.
4. **Verification:** Monitoring of global soil health and biodiversity indices via the Global Organic Tribunal (GOT).

V. LEGAL & POLICY CONSIDERATIONS

The UDOR 2026 renders "Crown Land" and other colonial legal fictions as null and void where they conflict with Indigenous land title and organic stewardship. It establishes the **Global Organic Tribunal** as the primary enforcement body for planetary rights.

VII. CONCLUSION & IMPLICATIONS

The UDOR 2026 is the definitive roadmap for a sustainable future. By aligning legal rights with biological reality, we ensure that the Organic Revolution of 2030 is not merely a goal, but an inevitable evolution of human consciousness and governance.
