

THE PROBLEM

You're Making Decisions

with *Incomplete Information.*

Every week, thousands of organic breakthroughs happen — in materials science, agriculture, nutraceuticals, bioplastics, clean chemistry, and sustainable supply chains. Almost none of it reaches you in time to matter.

The mainstream search engines bury organic intelligence under ad-funded noise. Industry newsletters are slow, paywalled, or irrelevant to your specific domain. Meanwhile, the companies that *do* have access to clean, verified organic intelligence? They're moving faster. Growing faster. Positioning faster.

You deserve the same advantage.

"The post-petroleum era isn't a distant future — it's an active present. The only question is whether you're navigating it with real intelligence or guesswork."

Introducing *Search For Organics*

The dedicated organic intelligence platform built by researchers, investigators, and organic pioneers — for the same.

SearchForOrganics.com is not a blog. It is not a product directory. It is a curated intelligence environment — a mission-driven research hub where organic knowledge is organized, cross-referenced, and made actionable for professionals, advocates, entrepreneurs, and conscious consumers who are serious about the organic transition.

Founded by Marie-Soleil Seshat Landry — CEO of Landry Industries Inc., OSINT investigator, and organic materials researcher — Search For Organics distills years of frontline intelligence work into a publicly accessible resource. No fluff. No filler. No petroleum lobby.

WHAT YOU'LL FIND

Intelligence Across Every Organic *Domain*

Search For Organics covers the full spectrum of the organic revolution — from the molecular to the geopolitical. Here's what's waiting for you:

Organic Agriculture & Food Systems

Verified intelligence on regenerative farming, soil biomes, pesticide-free supply chains, and the global food sovereignty movement.

Bio-Based Materials Science

Cutting-edge research on hemp composites, bioplastics, plant-derived polymers, and the end of petroleum-based manufacturing.

Nutraceuticals & PhytoIntelligence

Evidence-based plant

Policy, Law & Organic Rights

Tracking organic legislation,

medicine research, including the proprietary PhytoIntelligence hypothesis engine and clinical protocol development.

corporate accountability, Indigenous land rights, and the Universal Declaration of Organic Rights.

Clean Chemistry & Green Industry

The science of organic transition at industrial scale — carbon capture, bio-refineries, circular economies, and green supply chains.

OSINT & Organic Sector Intelligence

Open-source intelligence methodology applied to the organic sector. Who's moving, who's obstructing, and what the data actually says.

WHY IT MATTERS

The Organic Revolution Is *Not Optional*.

- ✦ Petroleum-based systems are collapsing under ecological, economic, and political pressure — organic alternatives are the only viable successor infrastructure.

-
- ✦ The global organic market is expanding at scale, but most actors are navigating it with outdated, fragmented, or deliberately distorted data.
-
- ✦ Organic food, materials, and medicine represent a convergent intelligence domain — one that rewards the informed and punishes the ignorant.
-
- ✦ Indigenous and land-based communities hold generational organic knowledge that is being systematically erased — documenting and distributing it is an act of civilizational preservation.
-
- ✦ Anyone building a business, research program, or policy framework without access to the latest organic intelligence is operating blind in a rapidly shifting landscape.

"Search For Organics exists because the information asymmetry in the organic sector is not accidental — and closing that gap is a political act as much as a research one."

"I built Search For Organics because I couldn't find a single platform that treated the organic transition with the rigor it deserves — as a civilizational imperative, not a lifestyle niche. This is that platform."

— MARIE-SOLEIL SESHAT LANDRY, FOUNDER & CEO,
LANDRY INDUSTRIES INC.

WHO THIS IS FOR

Built for the *Serious* Organic Thinker

Search For Organics is not for the casual browser. It is for:

- ✦ Organic entrepreneurs and founders building the next generation of bio-based businesses and need verified market and scientific intelligence.
- ✦ Researchers and scientists working in plant medicine, sustainable chemistry, agricultural innovation, or materials science.
- ✦ Policy advocates and legal professionals developing organic rights frameworks, environmental legislation, or Indigenous land protection

instruments.

- ✦ **Journalists and investigators** covering the organic transition, corporate greenwashing, or the collapse of petroleum monocultures.
 - ✦ **Conscious consumers and community leaders** who want to understand the organic economy at a level deeper than a grocery store label.
 - ✦ **Students and self-taught researchers** who refuse to wait for institutional access to start doing serious work.
-

The Revolution Has *a Search Engine.*

Free. Unsponsored. Intelligence-first. Built in Moncton, New Brunswick, for the whole organic world.
